

2009 Update

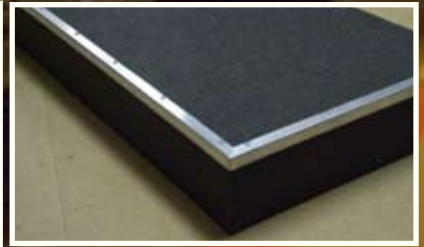

Stepping up for the New Year

IPS has again expanded stock of all the items required to construct tiered seating, including custom built carpet covered tread units with aluminium edging for corporate events, as seen in use at the ICC, Birmingham.

3' Handrail is now stocked to enable shallower tiers for choirs, or viewing platforms to ensure that all the audience are protected.

6" Tread units are also new in stock, ideal for maximising the number of tiers in the available space. Projects are becoming ever more complex, with a recent installation including a 10 tier viewing platform for a boxing match, complete with an entrance tunnel built over the existing stage in a venue!

Rolling Risers

If you need to minimise change over times between bands, a rolling riser could be the answer. IPS can supply a platform or a series of platforms to suit your requirements. Sizes available from riser for a single guitar/bass amp to a drum kit to a full band. Static platforms are also available- make your drummer more visible, or add a Rock and Roll style runway to your existing stage...

Showmans Show

IPS exhibited at the Showmans Show for the first time in the latter part of 2008. Displaying the MPT Roof Structure, complete with PA wings, along with a range of staging accessories and crowd barrier. The Stand attracted a lot of interest from visitors to the event, and also showcased the new LED Arc Bars, and the ever popular Martin Mac 700 moving head fixtures.

IPS Bars

If you need a temporary bar or serving surface, then IPS Bars could be the answer! Constructed from the modular Litedeck system, bars can be made in virtually any length or layout. Fitted with black wooden tops and wooden front panels, the bars are tough enough to dance on, and with 2' and 4' options, are deep enough to protect your stock. IPS Bars have been supplied for various dance music events for the last 3 years, they provide a very cost effective serving solution- contact us for further details.

More Balls for 2009

Despite credit crunch fears, IPS knows everyone needs balls- so have added more sizes to the mirrorball inventory- including a 1m diameter monster!

LED Arc Bars

These versatile fixtures from Showtec have already seen a lot of action in the short time they have been in stock (including at the Showmans Show, over the page). They feature a total of 54 1w LEDs. Arranged in a 3 cell column, the Arc Bars can also be linked together to form long battens, or in a grid style. With a 30 degree beam angle and full 12 channel DMX control, they are ideal for stage effects, as well as cyc and wall washes. With an IP65 Rating, they are ideal to be used outside. Each unit has a link out for both power and DMX, so fixtures can easily be chained together. Fitted with 16a connectors for power, and XLR connectors for data for maximum compatibility, these fixtures are impressing everyone that sets eyes on them!

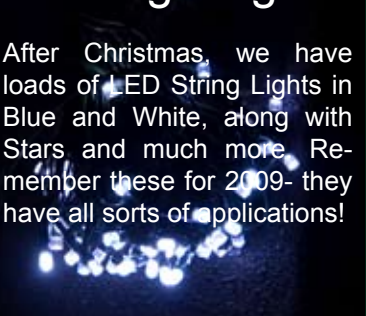

Avolites Pearl Tiger

New to the Lighting Control Stocks is the new compact version of the Pearl. Ideal for small systems, or where control space is at a premium. Complete with LCD display, and capacity to save to USB.

LED Lighting

After Christmas, we have loads of LED String Lights in Blue and White, along with Stars and much more. Remember these for 2009- they have all sorts of applications!

Coming soon...

New for summer 2009 is a Prolyte 10m by 8m Arc Roof stage. This will complement the existing 8m by 6m Arc roof, which has proved very popular, and also satisfy the requests for something a little bigger. Another new addition will be covered PA risers, ideal for use with the Arc Stages.
